

# COUGAR PORTABLE REFRACTOMETER

The Cougar Portable Refractometer is a tool used to determine the concentration of a water solution measuring its refractive index.

## Features

- Checks the concentration value of the coolant to water mixture used in the grinding machine
- Allows users to measure the correct concentration value of the coolant, the range varies from 1 to 10 (BRIX) and is usually between 1.5% to 2%
- Provides important readings when operating grinding machines: the coolant solution needs to be correct to get best results
- Accurate readings eliminate problems caused by the coolant being too strong or too weak.
